

# 人工智能基础

徐林莉 [linlixu@ustc.edu.cn](mailto:linlixu@ustc.edu.cn)

# 课程简介

## □ 教材

- ▣ Artificial Intelligence – A modern approach (2003)

S. Russell and P. Norvig

人工智能——一种现代方法

## □ 课程考核

- ▣ 学期总评=期末考试(60%)+书面作业(15%)+实验部分(25%)

## □ 课件可于

<http://staff.ustc.edu.cn/~linlixu/ai2018spring/> 下载

# 课程大纲

- 第一部分：人工智能概述/Introduction and Agents (chapters 1,2)
- 第二部分：问题求解/Search (chapters 3,4,5,6)
- 第三部分：知识与推理/Logic (chapters 7,8,9,10)
- 第四部分：不确定知识与推理/Uncertainty (chapters 13 -17)
- 第五部分：学习/Learning (chapters 18,19,20,21)

# 助教

盛鑫 [xins@mail.ustc.edu.cn]

申书恒 [vaip@mail.ustc.edu.cn]

赵若宇 [zry1997@mail.ustc.edu.cn]

梁润秋 [815556875@qq.com]

# Chapter 1. Introduction

# Introduction

- What is AI?
- The history of AI (历史)
- Recent progress in AI (现状)

# Sci-Fi AI?

# Threats of AI?

2 December 2014 Last updated at 13:02

## Stephen Hawking warns artificial intelligence could end mankind

 [COMMENTS \(1027\)](#)

**By Rory Cellan-Jones**  
Technology correspondent

Stephen Hawking: "Humans, who are limited by slow biological evolution, couldn't compete and would be superseded"

**Prof Stephen Hawking, one of Britain's pre-eminent scientists, has said that efforts to create thinking machines pose a threat to our very existence.**

# Brand New Achievement of AI

Silver, D. et al. Nature (2016)

Go, a complex game popular in Asia, has frustrated the efforts of artificial-intelligence researchers for decades.

ARTIFICIAL INTELLIGENCE

## Google masters Go

*Deep-learning software excels at complex ancient board game.*

<http://staff.ustc.edu.cn/~linlixu/ai2018spring/>

# What is AI?

Different people think of AI differently

Views of AI fall into four categories:

Thinking humanly	Thinking rationally
Acting humanly	Acting rationally

The textbook advocates “acting rationally（理性的）”

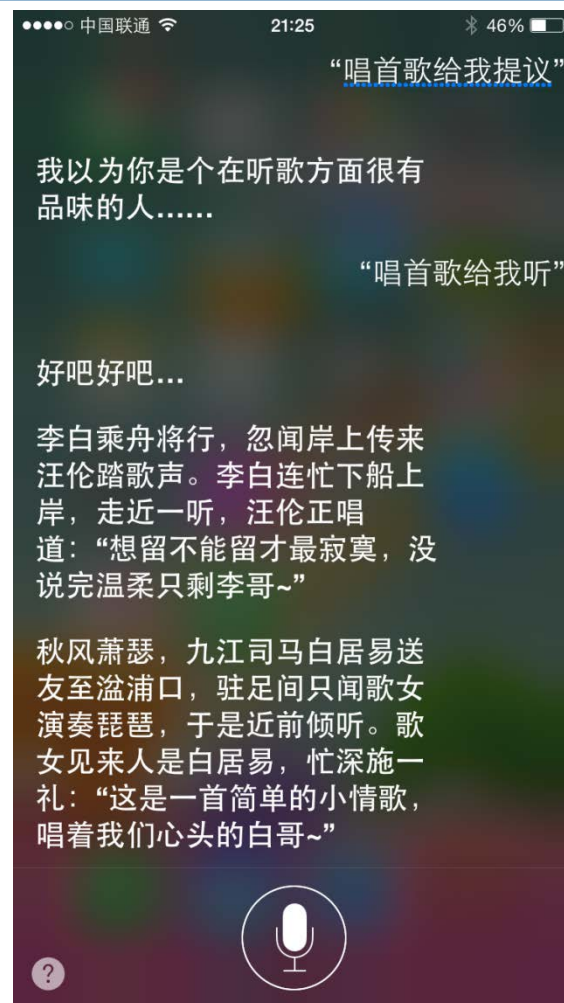

# Acting humanly: Turing Test 图灵测试

- Turing (1950) "Computing machinery and intelligence":
  - ▣ "Can machines think?" → "Can machines behave intelligently?"
  - ▣ Operational test for intelligent behavior: the Imitation Game

- ▣ Predicted that by 2000, a machine might have a 30% chance of fooling a lay person for 5 minutes
  - ▣ Anticipated all major arguments against AI in following 50 years
  - ▣ Suggested major components of AI: **knowledge** (知识), **reasoning** (推理), **language understanding** (语言理解), **learning** (学习)
- Problem: Turing test is not reproducible or amenable to mathematical analysis

# Acting humanly: Turing Test 图灵测试

# Thinking humanly: cognitive modeling

## 认知模型

- 1960s "cognitive revolution": information-processing psychology
- Requires scientific theories of internal activities of the brain
- -- How to validate? Requires
  - 1) Predicting and testing behavior of human subjects (top-down)
  - or 2) Direct identification from neurological data (bottom-up)
- ▣ Both approaches (roughly, Cognitive Science and Cognitive Neuroscience) are now distinct from AI

# Thinking rationally: "laws of thought"

- Aristotle: what are correct arguments/thought processes?
- Several Greek schools developed various forms of *logic: notation* (符号) and *rules* (规则) of *derivation* (推导) for thoughts; may or may not have proceeded to the idea of mechanization
- Direct line through mathematics and philosophy to modern AI
- Problems:
  - ▣ Not all intelligent behavior is mediated by logical deliberation
  - ▣ What is the purpose of thinking? What thoughts should I have?
  - ▣ Logical systems tend to do the wrong thing in the presence of **uncertainty**

# Acting rationally: rational agent

- **Rational** behavior: doing the right thing
  - ▣ The right thing: which is expected to maximize goal achievement, given the available information
  - ▣ Doesn't necessarily involve thinking – e.g., blinking reflex – but thinking should be in the service of rational action
  - ▣ Entirely dependent on goals!
  - ▣ Irrational  $\neq$  insane, irrationality is sub-optimal action
  - ▣ Rational  $\neq$  successful

# Acting rationally: rational agent

- Our focus here:
  - ▣ Systems which make the best possible decisions given goals, evidence, and constraints
  - ▣ In the real world, usually lots of uncertainty
    - ... and lots of complexity
  - ▣ Usually, we're just approximating rationality

# Maximize Your Expected Utility

# Rational agents

- An **agent** is an entity that perceives and acts
- This course is about designing rational agents
- Abstractly, an agent is a function from percept histories to actions:  
 $[f: P^* \rightarrow \mathcal{A}]$
- For any given class of environments and tasks, we seek the agent (or class of agents) with the best performance
- Caveat: computational limitations make perfect rationality unachievable  
→ design best **program** for given machine resources

# AI prehistory

- Philosophy Logic, methods of reasoning, mind as physical system foundations of learning, language, rationality
- Mathematics Formal representation and proof algorithms, computation, (un)decidability, (in)tractability, probability
- Economics utility, decision theory
- Neuroscience physical substrate for mental activity
- Psychology phenomena of perception and motor control, experimental techniques
- Computer engineering building fast computers
- Control theory design systems that maximize an objective function over time
- Linguistics knowledge representation, grammar

# AI history

- The gestation of AI 孕育期 (—1956)
- Reasoning methods 注重推理时期 (1956-1975)
- Knowledge-based system 知识运用时期 (1976-1988)
- Integration 集成运用 (1989- present)

# The Gestation of AI

- 古希腊**Aristotle**（亚里士多德BC 384-322），给出形式逻辑的基本规律 **Syllogism**(三段论)。
- 英国**Bacon**（培根1561-1626），系统地给出**Induction**(归纳法)。
- 德国**Leibnitz**（莱布尼茨1646-1716）提出**Symbolic Logic**(数理逻辑)。
- 英国**Boole**（布尔1815-1864）提出**Boolean Algebra**(布尔代数)系统，实现了思维符号化和数学化

# The Gestation of AI (Cont.)

- 1936 英国Turing（图灵, 1912-1954）:理想计算机模型Turing Machine（图灵机）
- 1946 美国Mauchly（莫克利）, Eckert（埃克特）: ENIAC
- 1948 美国Shannon（香农）: Information Theory(信息论)
- 1950 Turing Test图灵测试

# The Birth of AI (1956)

John McCarthy organized a two-month workshop at Dartmouth in the summer of 1956, ten young men were there :

McCarthy, Minsky, Rochester, Shannon, Moore, Samuel, Selfridge, Solomonff, Simon, Newell.

They introduced all the major figures to each other and agreed to adopt the name of **Artificial Intelligence** for the field.

# Abridged history of AI

- 1943 McCulloch & Pitts: Boolean circuit model of brain
- 1950 Turing's "Computing Machinery and Intelligence"
- 1956 Dartmouth meeting: "Artificial Intelligence" adopted
- 1952—69 Look, Ma, no hands!
- 1950s Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
- 1965 Robinson's complete algorithm for logical reasoning
- 1966—73 AI discovers computational complexity  
Neural network research almost disappears
- 1969—79 Early development of knowledge-based systems
- 1980-- AI becomes an industry
- 1986-- Neural networks return to popularity
- 1987-- **AI becomes a science**
- 1995-- The emergence of intelligent agents

# AI Today

- Mostly about engineering domain-specific solutions rather than creating general theories
- We don't know how to do most of intelligent things, but the rest can be solved pretty well
- A set of “tools” for representing information and using them to solve specific tasks
  - ▣ Neural networks, hidden Markov models, Bayesian networks, heuristic search, logic, ...
- There's no magic in AI. It's all about **representation, optimization, probability, and algorithms**

# Well-known AI applications

- Expert systems (organic chemistry, medicine, geology, configuring computers)
- Speech recognition
- Handwriting recognition
- Game playing (chess, checkers, now Go)
- Robots (automated cars, ping pong player, Honda robot)
- Automated theorem proving
- Web search engines
- Natural language understanding (machine translation, Google)
- Logistics scheduling (military --- people, cargo, vehicles)
- Cruise missiles
- Microsoft Answer Wizard

# State of the art

- Google language translation services
- Google automatic news aggregation and summarization
- Nuance voice recognition (behind Apple's Siri)
- Face detection and face recognition systems
- Apple Siri question-answering system
- IBM Watson question-answering system
- IBM Deep Blue chess playing program
- Deepmind AlphaGo
- Microsoft Photosynth
- Google Goggles
- Driverless cars

# Machine Translation

The spirit is willing but the flesh is weak. [*Bible, Matthew 26:41*]

Дух охотно готов но плоть слаба	Spirit is willingly ready but flesh it is weak
精神是愿意的但骨肉是微弱的	The spirit is wants but the flesh and blood is weak
精神は喜んでであるが、肉は弱い	Mind is rejoicing,, but the meat is weak
El alcohol está dispuesto pero la carne es débil	The alcohol is arranged but the meat is weak
الكحول مستعدة غير أنّ اللحم ضعيف	The alcohol is ready nevertheless the meat is weak.

Statistical machine translation models

# Face Detection

- Now in most digital cameras for auto focusing

Also blink and smile detection!

# Microsoft Kinect for XBOX

# Question Answering

- Feb 2011, Watson (沃森) beat human on the quiz show Jeopardy!. And received the first prize of \$1 million.

# Self-driving cars

# Summary

- Applications of AI:
  - ▣ high-impact (affect billions of people)
  - ▣ diverse (language, vision, robotics)
- Challenges: really hard...
  - ▣ computation complexity
  - ▣ information complexity
- Paradigm: modeling + algorithms
